# **1. Introduction**

## **1.1 Purpose**

Release Number 1.0

This software aims to assist the user in managing their records via print and recording mechanisms of the program.

## **1.2 Document Conventions**

All requirements have their own priorities.

## **1.3 Intended Audience and Reading Suggestions**

This document's intended use is for users, testers, and developers.

## **1.4 Product Scope**

This application is a local desktop application intended for the management of departmental data.

## **1.5 References**

RFP

Use Cases

# **2. Overall Description**

## **2.1 Product Perspective**

This program is self-contained. Any new updates/features will be provided by the team.

## **2.2 Product Functions**

The following functions of this application are:

- Account creation, logging in
- Adding/managing tenant data
- Adding new expenses
- Allocating budget categories to given expenses
- View/Display record data
- filter data

## **2.3 Operating Environment**

This application will require either Windows or Mac OS.

## **2.4 Design and Implementation Constraints**

The design of the application must meet professional and industry standards, practicing application security and ethics.

## 2.5 User Documentation

An instructional guiding PDF will be provided along with the software.

## 2.6 Assumptions and Dependencies

All Windows/Mac OS devices must have enough space and ram in order to successfully run, install, and operate the application. An internet connection will be required for the installation process.

# 3. External Interface Requirements

## 3.1 User Interfaces

### 3.2 Hardware Interfaces

Devices that support Windows and MacOS will be able to use the program.

### 3.3 Software Interfaces

Based on the events run by the user, the application will work along with the user, providing necessary guidance as needed.

### 3.4 Communications Interfaces

To use the program an internet connection must be established.

## 4. System Features

- Login

- Account
  - Create
- Tenant List \*
  - Modify
  - Display / Filter

#### 4.1 Use Cases

Use case 1	Create Account
Actor	User (the landlord)
Description	User will be able to sign up and create an account
Pre-Conditions	User does not have an account
Flow of Control	<ul style="list-style-type: none"> <li>- Sign up button link</li> <li>- Input information form</li> <li>- Create username and password</li> <li>- Submit link</li> </ul>
Post-Conditions	<ul style="list-style-type: none"> <li>- Successful log-in will allow the display of additional applications/features.</li> </ul>
Error-Conditions	<ul style="list-style-type: none"> <li>- Password exceeds required characters.</li> <li>- No password was entered.</li> <li>- No username was entered.</li> <li>- An account with the same username was already created.</li> </ul>
Nonfunctional Requirements	<ul style="list-style-type: none"> <li>- Account generation should be quick.</li> <li>- Interface of the sign-in system should be user friendly.</li> </ul>

Use case 2	Login
Actor	User (the landlord)
Description	User will be able to input their

	information to login to their account
Pre-Conditions	User has an account
Flow of Control	<ul style="list-style-type: none"> <li>- Button to “Log In”</li> <li>- Display prompting the user to enter their user and password into the given fields.</li> <li>- User clicks the enter button</li> </ul>
Post-Conditions	Upon successfully entering their information, the User is then taken to the application portal.
Error-Conditions	<ul style="list-style-type: none"> <li>- User has entered the wrong password.</li> <li>- User has entered the wrong username.</li> </ul>
Nonfunctional Requirements	<ul style="list-style-type: none"> <li>- Login system should work swiftly.</li> <li>- Interface of the sign-in system should be user friendly.</li> </ul>

Use case 3	Display Tenant List
Actor	Landlord
Description	Manage and organize list of tenants
Pre-Conditions	Landlord must have tenant paying rent in order to be displayed on the list
Flow of Control	<ul style="list-style-type: none"> <li>• Landlord chooses “Display Tenant List” <ul style="list-style-type: none"> <li>◦ Software displays list of tenants</li> </ul> </li> <li>• Landlord has the option to filter tenant list <ul style="list-style-type: none"> <li>◦ Software can order by several filters (alphabetical, amount of rent paid, date added to list)</li> </ul> </li> </ul>

Post-Conditions	The software will display the list of tenants in the landlords desired order
Error-Conditions	N/A
Nonfunctional Requirements	Tenant list should be neatly organized and displayed and should display within 3 seconds

Use case 4	Rental income record
Actor	Landlord
Description	Display rental income record
Pre-Conditions	User is logged in
Flow of Control	<ul style="list-style-type: none"> <li>• Landlord chooses “Display rental income record” <ul style="list-style-type: none"> <li>◦ Software displays list of tenants and their income</li> </ul> </li> <li>• Landlord has the option to filter tenant list <ul style="list-style-type: none"> <li>◦ Software can order by several filters (alphabetical, income, date added to list)</li> </ul> </li> </ul>
Post-Conditions	System will display the list of landlord and their incomes
Error-Conditions	N/A
Nonfunctional Requirements	Interface should be user friendly Table of rental income record should be displayed within 3 seconds

Use case 5	Display expense record
Actor	Landlord
Description	The landlord must be able to to record outgoing expenses
Pre-Conditions	User must be logged in
Flow of Control	The user click on “Expense” button

	It has columns for: -Each expense; - the date; - the payee (the company or person to whom John writes the check); - amount paid.
Post-Conditions	System will display the list of expenses and the total per month/year
Error-Conditions	N/A
Nonfunctional Requirements	Interface should be user friendly Table of rental income record should be displayed within 3 seconds

Use case 6	Display the annual summary
Actor	Landlord
Description	User will be able to click on a link that will display the annual summary
Pre-Conditions	User must be logged in
Flow of Control	<ul style="list-style-type: none"> <li>- User clicks on "Annual Summary" link</li> <li>- Window displays information on annual summary               <ul style="list-style-type: none"> <li>- Displays amount spent on expenses, repairs, etc</li> <li>- Displays amount made in rent</li> </ul> </li> </ul>
Post-Conditions	Display a table of annual summary
Error-Conditions	N/A
Nonfunctional Requirements	Interface should be user friendly Table of rental income record should be displayed within 3 seconds

Use case 7	Add New Tenant
Actor	Landlord
Description	The landlord must be able to add a tenant and their information
Pre-Conditions	The user must be logged in
Flow of Control	User click on add tenant button User input tenant's information, including name, income, etc.
Post-Conditions	System add tenant to the database and notify landlord of tenant being added
Error-Conditions	<ul style="list-style-type: none"> <li>• Tenant is already on the list/ in database</li> </ul>
Nonfunctional Requirements	Tenant should be added to the list within 3 seconds

Use case 8	Input the rental payment
Actor	User (landlord)
Description	The landlord must be able to add a new event
Pre-Conditions	The landlord possesses information they would like to input into the system.
Flow of Control	<ul style="list-style-type: none"> <li>- The user navigates to the button Enter Payment and clicks it</li> <li>- The user is provided a list of tenants and chooses one (The user could also filter the tenants</li> </ul>

	<p>list by inputting a name to name search, or room number to room number search).</p> <ul style="list-style-type: none"> <li>- The user is then prompted to add information regarding the payment received by said tenant.</li> <li>- The user presses enter and the data processes.</li> </ul>
Post-Conditions	Upon processing, the data is updated to the system.
Error-Conditions	N/A
Nonfunctional Requirements	<p>Time taken for the information to be updated into the system should be quick.</p> <p>The interface for entering rent payment should be user-friendly by a simple and clean look.</p>

## 5. Nonfunctional Requirements

All processes and functions should occur within 3 seconds.

## 6. Other Requirements

All materials and software documentation is owned by Group7™ and may not be resold or redistributed without permission.
